## Note from the Branch Chief

The Public Drinking Water Branch of the Missouri Department of Natural Resources has the important mission of ensuring public water systems provide safe drinking water to every visitor and resident of Missouri. To do this, the branch sets limits and monitors for 91 contaminants that could be found in public drinking water supplies. This report provides information on how well public water systems in Missouri are meeting the standards for providing safe drinking water.

This is the fourteenth Annual Compliance Report the Public Drinking Water Branch has produced since 1996 and covers compliance statistics for calendar year 2009. Each state produces a similar annual report on its public water systems. The reports are made available to the public and are provided to the U.S. Environmental Protection Agency for inclusion in a national report summarizing the performance of the nation's public drinking water systems.

The branch provides this report not only to comply with statutory obligations mandated by the federal Safe Drinking Water Act, but also to focus attention and provide an understanding of the importance of quality drinking water to the public.

The report shows that Missouri's water systems continued to provide safe and reliable drinking water in 2009. The Total Coliform Rule monitoring and maximum contaminant level requirements continue to generate the most violations because they require the most frequent sampling. Several Missouri systems are also struggling to comply with the Radionuclides Rule. The high cost of radionuclide treatment technologies and limited disposal options make it difficult for small systems to comply. A few systems are experiencing difficulty complying with current disinfection byproduct requirements as we work to prepare for the more stringent Stage 2 Disinfectants and Disinfection Byproducts Rule, which becomes effective in 2012. On a more positive note, compliance with the Consumer Confidence Report requirements has increased dramatically in the last couple of years, largely due to increased staff efforts and assistance provided by the Missouri Rural Water Association. In addition, the number of acute Total Coliform violations dropped significantly in 2009. We continue focusing on these and other standards to ensure Missourians will continue to receive high-quality, safe drinking water.

In late 2009 the new federal Groundwater Rule went into effect, imposing a host of new requirements on the 92 percent of Missouri Public Water Systems that use groundwater as their source. This rule is proving very challenging to both public water systems and regulators. The department has been working hard to assist affected public water systems struggling to comply with this complicated rule.

I hope you find this report informative and useful.

A handwritten signature in black ink, appearing to read 'Sturgess', with a stylized flourish at the end.

Steven W. Sturgess, Chief  
Public Drinking Water Branch  
Missouri Department of Natural Resources

## What is a Public Water System?

A public water system is defined as a system that provides water through piping or other constructed conveyances for human consumption to at least 15 service connections, or serves an average of at least 25 people for at least 60 days each year. These are the systems that are the focus of this report.

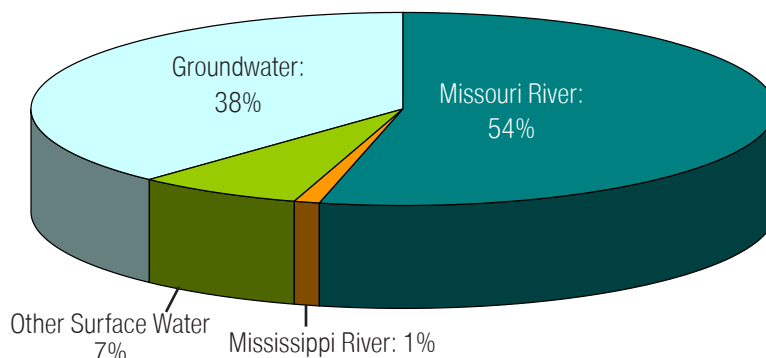

There are three types of public water systems:

- **Community systems** include towns, water districts, subdivisions, mobile home parks and residential facilities such as nursing homes or prisons.
- **Nontransient non-community systems** serve the same people every day, but not in a residential setting; schools and factories are good examples.
- **Transient non-community systems** serve different people daily, such as restaurants, resorts and rest stops. These smaller systems are typically in rural areas where it is not feasible to hook up to a city or water district.

Requirements for construction, operation, monitoring, etc., vary among systems based on their type, size and source of water.

Water testing at systems that are not public water systems (for example, homes served by private wells) is facilitated by local and county sanitarians and the Missouri Department of Health and Senior Services, rather than the Department of Natural Resources.

## Source of Water (Percent Population Served)

## The Missouri Public Water System Universe

In 2009, there were 2,788 active public water systems in Missouri. Of this total, 1,482 were community, 247 were non-transient non-community and 1,059 were transient non-community systems.

The community water systems in Missouri served more than 5 million citizens in 2009. These citizens benefit from one of Missouri's most outstanding resources: its water. There is generally a large quantity of high-quality water in Missouri.

By far the largest source of drinking water for Missourians is surface water from the Missouri River. The abundant supply of water in the Missouri River and its proximity to the state's major population centers make the use of this river as a source so popular.

Groundwater is the next most used source of drinking water for Missouri's community supplies. In southern Missouri, good quality groundwater is easy to obtain and typically requires very little treatment to be used

for drinking water. Some groundwater systems have the best of both worlds and use alluvial wells in valleys of the Missouri and Mississippi river system where they can get large volumes of water free of surface contaminants. Wells in the Missouri River alluvium provide groundwater to a significant population. More than half the state's population get their drinking water from the Missouri River or its alluvial wells. The importance of this resource cannot be overstated.

## Analysis of Compliance

We expect a lot from our public water systems and require testing for 91 different regulated chemicals and microbiological contaminants on a regular schedule. A system is to be applauded for performing all required testing and meeting all maximum contaminant levels, also referred to as MCL, and treatment technique standards. When violations do occur, that often is the first identification of a problem and can be the first step toward correcting it. Many public water systems perform testing beyond what is required by the state.

The Summary of Violations table in this report counts individual violations. Each public water system has the potential to accumulate multiple violations during the year because there are multiple regulations involved and some monitoring is on a monthly schedule. For example, the monitoring requirements for the Total Coliform Rule alone create a potential for more than 30,000 violations. This puts some perspective on the violation figures shown in the Summary of Violations table

## 2009 Public Water Systems by Type

## Significant Non-Compliers

## Percent of Population Served by Significant Non-Compliers

## Percent Population of Community Water Systems In Violation of Health-based Standards

There is overlap in that some systems violate more than one area.

and the information in the appendices.

Another factor to consider is the number of systems that have violations. Many of the violations are from water systems with problems that result in multiple violations during the year. Other systems may only have one or two violations.

Appendices A through D list specific systems by county. The department uses various methods to focus on the water systems that need attention. One of these is the Significant Noncomplier, or SNC, List. This is a list of systems with serious violations that potentially affect public health or with multiple monitoring violations. Appendix D gives the list of Significant Non-Compliers for 2009.

Some of the systems listed, however, may have already resolved their problems. During 2009 there were 151 systems on the SNC list. Those systems listed as Significant Non-Compliers typically serve a small population. They accounted for 5.4 percent of public water systems, and 3.37 percent of the population served. Maximum contaminant level and treatment technique violations represent the most significant impact on the public health. These occurred at a small number of public water systems serving approximately 6.2 percent of the population.

Since 1996, when the first Annual Compliance Report was produced, through 2003, Missouri has consistently met or exceeded EPA's target of serving water that meets all health-based standards to 95 percent of the population. Again in 2006, Missouri community water systems met EPA's target. The small dip below the 95 percent target in 2004 and 2005 did not represent a reduction in water quality, but is a result of more stringent drinking water standards. In 2007, this compliance measure dropped significantly because Missouri's largest water system had a treatment technique violation. Even though the event was of short duration, the entire population had to be counted in this statistic. For more information on this item, refer to the 2008 Annual Compliance Report.

EPA and the states have worked together to develop an additional compliance measure called “person-months during which community water systems provide water that meets health-based standards.” This measure is intended to take into account situations where violations are of short duration. Missouri achieved 96.2 percent compliance with this measure in 2009. The national target for federal fiscal year 2009 was 95 percent.

The majority of MCL and monitoring violations in 2009 were for failure to meet the requirements of the Total Coliform Rule. Total coliform bacteria serve as an indicator that disease-causing organisms may be present. All public water systems in the state must test for this type of bacteria every month they dispense water to the public. Monitoring violations are by far the most common violation for this rule. The department is particularly concerned when monitoring violations occur at public water systems that have a history of bacteriological contamination. Adequate testing is the only way to know for sure if the problems have been corrected or have reoccurred.

In 2009, 0.9 percent, 26 public water systems, had acute violations for fecal coliform or *E. coli*. (Four of these systems had multiple acute MCL violations during the year, resulting in a total of 31 acute MCL violations.)

Another way to look at the number of acute MCL violations is to compare the number that actually occurred to the number possible. Since bacteriological testing is required monthly, the 2,788 water systems had more than 30,000 chances to get an *E. coli* MCL violation. The 31 that actually occurred represent one-tenth of 1 percent of the number possible. While these acute violations can be serious, they are rare.

Some people may be more vulnerable to waterborne illness than the general population. To educate the public on this issue, community water systems include a warning in their annual Consumer Confidence Reports stating that some people may be more vulnerable to

## Drinking Water Trends

### Community Systems: Population Served Meeting All Health-Based Requirements

### *E. coli*/Fecal Coliform Acute MCL Violations

contaminants in drinking water than the general population. Immuno-compromised persons such as persons with cancer undergoing chemotherapy, persons who have undergone organ transplants, people with HIV/AIDS or other immune system disorders, some elderly, and infants can be particularly at risk from infections.

The Consumer Confidence Report provides detailed information about the specific community water system, while this report does not. Consumer Confidence Reports include specifics about the water system, including the source of drinking water and the levels of naturally occurring substances in drinking water. Usually these pose no health threat and are not violations. The

report must list violations of state and federal requirements for that year. The department has made a concerted effort to provide technical assistance to small water systems through a circuit rider to help with report preparation and distribution. As a result, the overall compliance rates have been high. In 2009, 97 percent of Missouri's community water systems distributed their Consumer Confidence Reports properly.

Anyone can request a copy of their report from their public water system or by calling the department's Public Drinking Water Branch at 800-361-4827 or 573-751-5331.

## Compliance Activities: Preserving the Quality of Drinking Water

The department works closely with violators to return them to compliance in a timely manner. This includes phone contacts, on-site inspections, meetings with owners or operators and technical assistance as needed. For the more serious violations, a Bilateral Compliance Agreement between the water system owner and the department is the tool used to move the system back into compliance. Bilateral Compliance Agreements are written agreements negotiated between and signed by the system owner and department staff. This process allows the department to determine the improvements the water system needs to make without either party having to endure the time and cost of litigation.

If a water system owner or operator violates a Bilateral Compliance Agreement, the department implements a negotiated settlement policy. Negotiated settlement agreements are more formal and enforceable than Bilateral Compliance Agreements and are reviewed and signed by staff from the Missouri Attorney General's Office. If the negotiated settlement agreement is unsuccessful, the department refers the case for legal action through the courts.

Public Drinking Water Branch staff work in

conjunction with other agencies to protect public health. By serving on a committee with staff from the Department of Health and Senior Services, the two agencies identify ways to support and benefit each other's activities. One of those areas is enforcement activity against facilities, such as restaurants, that are regulated by both agencies.

The department provides training and technical assistance in an effort to prevent the occurrence of violations. Training is routinely provided to operators and owners of public water systems around the state, primarily concentrating on the basic principles of running a water system, performing the required monitoring and preventing contamination of the system. Technical assistance in the form of phone contacts and on-site visits is also available to help water system operators avoid or correct problems. Staff in the department's regional and satellite offices carry out most of these activities.

For all violations, public water systems are required to notify the consumers they serve. The department provides all public water systems with the necessary forms and information to effectively notify the public. The method of notification varies by the violation and system type. Systems must report back to the department how the public notice was performed. Some violations, such as the confirmed detection of fecal coliform bacteria or E. coli, warrant immediate action due to the threat to public health. For such acute violations, the department requires systems to notify customers within 24 hours to boil water before consumption. Boil water orders remain in effect until the problem has been corrected and the water is safe to consume.

## For More Information

Information about Missouri's public water systems can be obtained by writing to the Missouri Department of Natural Resources, Water Protection Program, Public Drinking Branch, P.O. Box 176, Jefferson City, MO 65102-0176 or calling 800-361-4827 or 573-751-5331. Information is also available on the department's website at [www.dnr.mo.gov/env/wpp/dw-index.htm](http://www.dnr.mo.gov/env/wpp/dw-index.htm).

## Summary of Violations Table

The following definitions apply to the Summary of Violations table.

**Filtered Systems:** Water systems that have installed filtration treatment [10 CSR 60-4.050].

**Inorganic Contaminants:** Non-carbon-based compounds such as metals, nitrates and asbestos. These contaminants are naturally-occurring in some water, but can get into water through farming, chemical manufacturing and other human activities. [10 CSR 60-4.030].

**Lead and Copper Rule:** Lead and copper corrosion pose various health risks when ingested at any level, and can enter drinking water from household pipes and plumbing fixtures [10 CSR 60, Chapter 15]. Violations are reported for: failure to monitor; failure to install optimal corrosion control treatment or a source water treatment system that would reduce lead and copper levels in water at the tap; failure to replace lead service lines on the schedule required by the regulation; and failure to provide required public education about reducing or avoiding lead intake from drinking water.

**Maximum Contaminant Level:** The highest amount of a contaminant allowed in drinking water. Maximum Contaminant Levels, or MCLs, ensure drinking water does not pose a health risk. MCLs are defined in milligrams per liter (parts per million) unless otherwise specified.

**Monitoring:** The department specifies which water testing methods the water systems must use and sets schedules for the frequency of testing. A water system that does not follow the department's schedule or methodology is in violation. [10 CSR 60-4.010]. States must report monitoring violations that are significant as determined by the EPA Administrator, in consultation with the department. For purposes of this report, significant monitoring violations are major violations and they occur when no samples are taken or no results are reported during a compliance period.

**Organic Contaminants:** Carbon-based compounds, such as industrial solvents and pesticides. These contaminants generally get into water through runoff from cropland or discharge from factories. [10CSR 60-4.040 and 4.100].

**Radionuclides:** Radioactive particles that can occur naturally in water or result from human activity. Safe drinking water regulations set maximum contaminant levels on five types of radionuclides: radium-226, radium-228, uranium, gross alpha and beta particle/photon radioactivity [10 CSR 60-4.060].

**Surface Water Treatment Rule:** This includes a series of rules promulgated from 1989-2009 that establish criteria under which water systems supplied by surface water sources, or groundwater sources under the direct influence of surface water, must filter and disinfect their water (Surface Water Treatment Rule, Interim Enhanced Surface Water Treatment Rule, Long Term 1 Enhanced Surface Water Treatment Rule, Long Term 2 Enhanced Surface Water Treatment Rule). [10 CSR 60-4.050 and 60-4.052]

Violations of the surface water treatment rules are reported for the following categories:

- Monitoring, routine/repeat (for filtered systems): Failure to carry out required tests or to report the results of those tests. A major monitoring violation for the surface water treatment rule occurs when at least 90 percent of the required samples are not taken or results are not reported during the compliance period.
- Treatment techniques (for filtered systems): Failure to properly treat the water.

**Total Coliform Rule:** The Total Coliform Rule, or TCR, establishes regulations for microbiological contaminants in drinking water. These contaminants can cause a short-term health problem. If no samples are collected during the one-month compliance period, a major monitoring violation occurs. States report four categories of violations to EPA:

- Acute MCL violation: A violation where the system found fecal coliform or E. Coli, potentially harmful bacteria, in its water.
- Non-acute MCL violation: A violation where the system found total coliform in samples of its water at a frequency or at a level that violates the rule. For systems collecting fewer than 40 samples per month, more than one positive sample for total coliform is a violation. For systems collecting 40 or more samples per month, more than 5 percent of the samples positive for total coliform violation.
- Major routine and follow-up monitoring: . A violation where a system did not perform any monitoring.

- Sanitary Survey: A major monitoring violation if a system fails to collect five routine monthly samples if sanitary survey is not performed.

**Treatment Techniques:** A water disinfection process that EPA requires instead of a MCL for contaminants that laboratories cannot adequately measure. Failure to meet other operational and system requirements under the Surface Water Treatment and the Lead and Copper Rules have also been included in this category of violation for purposes of this report.

**Violation:** A failure to meet any state or federal drinking water regulation.

# Organic Contaminants: Jan. 1, 2009 - Dec. 31, 2009

		MCL		Treatment Technique		Significant Monitoring/Reporting

## Appendix C

### Major Repeat Monitoring Violations

The following systems had major repeat monitoring violations for the months listed. A major repeat monitoring violation occurs when a routine sample tests positive for total coliform bacteria and that system fails to submit any follow-up, or repeat, samples as required.

County	ID#	System Name	Month(s)
Barry	MO 5212608	The Golden Sub Shoppe	October
Benton	MO 3242534	Fairfield RV Park	August
Camden	MO 3036103	Blackhawk Estates	April
	MO 3212382	Shoneys Well - OWC	May
	MO 3250972	Oak Point Subdivision	October
Dade	MO 5110193	Stockton Mutton Creek Marina East	July, June
Franklin	MO 6036041	Melody Lake Subdivision	August
	MO 6180186	Shaw Nature Reserve	June
Greene	MO 5292347	Jump Stop 309	September
Jefferson	MO 6036077	Lake Adelle Subdivision	September
	MO 6048208	Valle Acres MHP	March
	MO 6241571	Living Well Village	April
Lincoln	MO 6041076	Cedar Ridge Estates	December
	MO 6170733	St Alphonsus School	October
Montgomery	MO 3281053	Loutre Shore Country Club	October, September
	MO 3291410	Danville Sinclair	June
	MO 6180572	New Florence Wood Products	August
Pettis	MO 3218188	Temp Stop	September
St Charles	MO 6048001	Laclede MHP	May
	MO 6240106	Cherokee Lakes Camp	June, August
St Clair	MO 5212121	Old Plantation Motel	January
Stone	MO 5036353	Scottsdale Subdivision	January
	MO 5258136	Pizza World	September, July
Taney	MO 5211164	Crocs Place	November
Vernon	MO 5024620	Vernon Co. PWSD #5	March
Warren	MO 6036189	Cedar Grove Village Subdivision	February
	MO 6036303	Oakview Estates Subdivision	August
Webster	MO 5292595	Luthys Buzz In 3	May, September

## Appendix D

### Significant Non-Compliers

The following systems had been deemed Significant Non-Compliers for 2009. These are the systems with serious violations that potentially affect public health or with multiple monitoring violations.

County	PWS ID #	Name	Rule
Audrain	MO 2010812	Vandalia	Total Haloacetic Acids
	MO 2010812	Vandalia	TTHM
Barry	MO 5272961	New Site Baptist Church	TCR
